## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 45,46,48-50,53,58, and 60-62 have been considered but are moot in view of the new ground(s) of rejection.

### ***Specification***

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the graft 362 of figure 91 is not described as cannular which is recited in claims 58 and 60-62.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 45,46,48-50,53,58, and 60-62 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Anderson et al. US PN 5,800,526.

5. Anderson et al. disclose in figures 2-7, 16, and 17 a vascular prosthesis comprising a tubular/cannular graft and stent, wherein the stent comprises a wire having a bend and integrally formed barbs (See c3:29-60, c4:41-67). The stent and barbs are machined from a flat sheet of metal (by laser cutting or chemical etching) such that the

barbs will bend outward upon expansion of the stent due to removed material in the area of the barbs (c9:16-26,42-50). Figures 16 and 17, as described at c12:52-65, describe additional embodiments in which integral barbs are formed outward (figure 16) or that point outward upon expansion (figure 17).
